Unit 2 Welcome to a Modern Port

Unit 2 is based on the information on the Port of Santander Homepage (<http://www.puertasantander.es/ingles/default.asp>)

Elegant, picturesque Santander, situated in the region of Cantabria, is typical of North Spain. The city lies in a beautiful setting, backed by open countryside and dramatic mountains. A very good road network connects Santander to the whole of Spain, Portugal and the South of France. A bustling regional capital and a popular holiday resort, Santander offers excellent beaches, splendid viewpoints, museums, galleries and a lively market. **1**

Vessel Types, Oil tanker

They come in two kinds: the crude carrier, which carries crude oil, and the clean products tanker, which carries refined products such as petrol, gasoline, aviation fuel, kerosene and paraffin. **1**

Tankers range in all sizes from small bunkering tankers of 1000 DWT, used for refuelling larger vessels, to the real giants the VLCC (Very Large Crude Carrier) of 200 000 - 300 000 DWT and the ULCC (Ultra Large Crude Carrier) of over 300 000 DWT. **2**

1 and 2 Quotations from Steve's Homepage by permission of Steve Harris

Vessel Types, LNG Carrier

"In its natural state, LNG is a gas; it must be pressurized into being liquid or kept as a liquid by reducing the temperature in order to transport it. " **1**

"The LNG vessels carry explosive gas - kept at below freezing temperatures - as an unstable liquid. This means that they carry extremely dangerous cargo. **2**

Quotations from Steve's Homepage / Vessel types / LNG carrier

The pop-up picture of a heavy lift vessel adapted from Steve's Homepage also with Steve Harris' permission.

Unit 3 Extra Reading

Ventilation

- 1 Adapted from Liisa Niinisalo Nautical Texts; Chapter 10: Ventilation on board, paragraph 3.

General stowage

- 1 Adapted from the former Homepage of P&O Nedlloyd Ltd 2004; section Cargo Care; Container talk

Humidity

- 1 Adapted from the former Homepage of P&O Nedlloyd Ltd 2004; section Cargo Care; Container talk

Condensation Sweating

- 1 Adapted from the former Homepage of P&O Nedlloyd Ltd 2004; section Cargo Care; Container talk

Container damage Segregation Infestation

- 1 Adapted from the former Homepage of P&O Nedlloyd Ltd 2004; section Cargo Care; Container talk

Dangerous Cargo

- 1 Adapted from the former Homepage of P&O Nedlloyd Ltd 2004; section Cargo Care; Container talk

Spillage

Spills of fuel oil on board should end up in the sludge tank but today's mixtures of fuel oils, resulting from drainage and leakage in machinery spaces, lubricants, detergents, solvents and water often find their way into the bilge water tanks. **1**

- 1 quoted from Clean Ship paragraph 4 ; www.gronkemi.nu/skepp_eng.html

Ballasting

- 1 adapted from IMO; Crude Oil Washing 2002

Unit 9, The Master, Responsibility

1 partly adapted from www.USMM.org ©1998 - 2006 U.S. Maritime Service Veterans.

The Second Officer

I have to ensure that bridge electronics, navigational and alarm systems, and the ship's navigational lights are in good working order. **1**

I provide the Master with information on transit routes to ports of call including the Sailing Directions, Coast Pilot, Light List and Tide and Current tables and any other source of information that might be required before entering or leaving port. **2**

- 1 Sentence adapted from Woods Hole Oceanographic Institution WHOI /Human ResourceS /Job descriptions/ Marine Crew
www.whoi.edu/services/HR/jobdescp/marine/master

- 2 Sentence adapted from Woods Hole Oceanographic Institution WHOI /Human ResourceS /Job descriptions/ Marine Crew
www.whoi.edu/services/HR/jobdescp/marine/master

The Chief Engineer

Text partly based on Woods Hole Oceanographic Institution WHOI /Human ResourceS /Job descriptions/ Marine Crew
www.whoi.edu/services/HR/jobdescp/marine/master

Able Bodied Seaman

We clean, chip, scrape, wire brushe, prime, and/or paint the hull, bulkheads, decks, passageways, deck machinery, or spaces, as directed. **1**

- 1 Sentence adapted from Woods Hole Oceanographic Institution WHOI /Human ResourceS /Job descriptions/ Marine Crew

Unit 11 - Fire fighting on board

Quotation:

"Of all the disasters which can happen to a vessel at sea, fire is one of the most devastating. Marine fire incidents are very destructive and have been responsible for the loss of many lives. Ship fires are second only to shipwrecks when calculating casualties and total loss." 1

- 1 Quotation from An introduction to Marine Fire Fighting on Fire Aid International Marine Division Homepage.

The texts on firefighting and equipment in this unit are partly adapted from the following sources:

- 1 Sections Fires in ships and Fire Precautions 1998-2004 Navis.gr® Non-Commercial Web Site. For nonprofit Educational and Informative Purposes. www.navis.gr/
- 2 Liisa Niinisalo; Nautical texts, Valtion painatuskeskus Helsinki 1984 Chapter 13 Fire a constant Enemy/ paragraphs 2 and 7

Now let's learn some more about survival in an emergency. 1

WHEN YOU HEAR AN EMERGENCY SIGNAL

Go to your station.

If possible, collect warm clothes, waterproof clothing and a lifejacket from their stowage.

Have a good drink of water.

...

...
