

Unit 3 Loading the MS Marina

Read & Listen

Important Structures: Questions & Orders

Exercise 1

1. What is the IMO class of these goods?
<The IMO class of these goods is> 6.1 toxic substances.
2. Are fork-lift trucks for the cargo holds available?
<Yes, fork-lift trucks are available>.
3. What is the safe working load of the derricks of the vessel?
<The safe working load of the derricks is> 40 tonnes.
4. What is the maximum loading rate?
<The maximum loading rate is> 500 tonnes per hour.
5. Close sea-valves and report.
<All sea-valves are closed>.
6. Stand by emergency fire pump and foam monitor.
<Emergency fire pump and foam monitor standing by>.
7. When will crude oil washing start?
<Crude oil washing will start in two zero minutes>.
8. Are your tanks inerted?
<Yes, my tanks are inerted>.
9. Can we connect the loading arm?
<Connect the loading arm in one five minutes>.

10. Are the cargo hoses connected?
<Yes, the cargo hoses are connected>.

Exercise 2

Plug the **<drip trays>** and report.
All **<drip trays>** are plugged.

Close the **<sea-valves>** and report.
All **<sea-valves are closed>.**

When will **<crude oil washing>** start?
<Crude oil washing> will start **<in one zero minutes>.**

Stand by **<foam monitor>** and report.
<Foam monitor standing by>.

Exercise 3

1. Can we connect **<the loading arm>**?
<No, you cannot connect> the loading arm yet.
2. Stand by **<spill control>** and report.
<Spill control standing by>.
3. Are the cargo **<hoses connected>**?
<Yes, cargo hoses are connected>.
4. Are the **<booms disconnected>**?
<No, the booms are not disconnected> yet.
5. 7. Fit **<bonding wire>** and report.
<Bonding wire is fitted>.

Extra Reading: Cargo Care and Handling

Exercise 1

1. All cargo handling gear needs frequent **overhauling**.
2. Some merchandise gives off a **pungent** smell.
3. This smell is liable to **contaminate** other goods.
4. Cover such goods with **tarpaulins**.
5. Handle fragile goods with **caution**.
6. Barrels of liquid may **leak** and cause damage.
7. Check that crates, drums, barrels or other packing are not damaged or **deformed**.
8. Liquid cargo runs in tubing called cargo **hoses**.
9. Always take into account the **nature** of the cargo.
10. The Chief Mate **is responsible for** loading and discharging.

Exercise 2

dunnage	material stuffed among cargo to avoid moisture or friction
to comply with	to follow
pests	insects causing damage to food
infestation	damaging insects/animals in large numbers
segregation	separation
to identify	to recognise
label	small piece of paper with information
rodents	animals with long sharp teeth
vermin	small animals damaging crops
appropriate	suitable

grease	fat
deformed	changed into a strange form
a tear	a hole made by ripping
damp	moist
internal damage	damage to the interior
odour	smell
to be incompatible	not to go together with
compatibility	suitability

Exercise 3

1. Air in empty oil tanks is often filled with **poisonous** gases.
2. In some cases the gases may even kill you: they are **lethal**.
3. In **making repairs** in the empty tanks on board, crew members may be killed due to lack of **ventilation**.
4. It is therefore important to wear **protective clothing** to protect your skin and to carry a **breathing apparatus** to help the intake of oxygen.
5. In fire-fighting on board it is important to wear a **smoke mask**.
6. There have been some cases of **suffocation** when the victims have not been able to get air into their lungs.

Exercise 4

Container or cargo **<sweating>** occurs when the outer surface of the container/cargo hold cools down to a temperature below that of the air enclosed in the container/hold. This results in **<condensation>**: droplets forming on the interior roof and interior side panels, and then **<dripping>** on to the cargo, causing **<mould>** and water damage.

This might happen, for example when cargo loaded in the tropical belt in warm conditions with high **<relative humidity>** is transported to cold winter conditions in Europe. The temperature outside the container gradually cools down during **<transit>**, leading to **<condensation>** inside the container. One simple solution may be **<to replace>** the warm moist air by proper ventilation or air **<conditioning>**.

Sometimes it is important that the air surrounding a cargo has to be very dry. Ventilated air then has to be passed through **<dehumidifier>** units. Various **<desiccants>** and **<absorbents>** can also be used to absorb moisture and help keep cargo dry.

Exercise 5

Today a great deal of the cargo carried on board ships falls under the **1. category** of dangerous goods. Knowledge of the IMO classification of dangerous goods is **2. vital** and it is equally important always to observe the **3. IMDG Code** when handling such goods. **4. Explosives**, **5. flammable substances**, poisonous or **6. noxious** cargo, **7. infectious substances**, radioactive materials and **8. corrosives** all require special precautions as to handling, stowing, **9. segregation** and labelling. So do e.g. goods that **10. are liable to** spontaneous heating and **11. combustion**.

Always check the **12. compatibility** of IMO class goods and ensure proper segregation. Thus, for example, flammable cargo must be stowed away from the engine room. Flammable cargo must be separated from the engine room and infectious substances must be separated by one hold/compartment from foodstuffs.

- 1. a group of similar things**
- 2. extremely important**
- 3. regulations on how to stow dangerous goods**
- 4. a substance that can explode**
- 5. a substance that will easily catch fire**
- 6. poisonous**
- 7. a substance that can spread bacteria**
- 8. substances that gradually eat away at others e.g. rust**
- 9. separation**
- 10. are apt to**
- 11. burning**
- 12. suitability**

Exercise 6

to ventilate	to pass air into and out of a space
to stow	to store
to comply with	to follow regulations
to waste	to use something too much or unnecessarily

to identify	to recognise
to overhaul	to examine a machine/to repair it
to infest	e.g. insects or animals that cause problems by being present in large numbers

to absorb	if a substance absorbs liquid it takes it in through its surface and holds it
to accumulate	to build up over time
to condense	if hot air or gas condense they change into liquid when becoming cooler
to contaminate	to make something dirty or poisonous
to suffocate	to die because you are unable to get air into your lungs
to corrode	to eat away gradually at another substance like rust does
to infect	to give or pass on a disease or bacteria

Exercise 7

to infest	<infestation>
to identify	<identification>
to comply with	<compliance>
to overhaul	<overhauling>
to waste	<waste>
to ventilate	<ventilation>
to stow	<stowage>
to suffocate	<suffocation>
to contaminate	<contamination>
to absorb	<absorbent>
to accumulate	<accumulation>
to infect	<infection>
to corrode	<corrosive>
to condense	<condensation>

Exercise 8

Example: 1. What is the container <capacity> of this vessel?

2. Are <**fork-lift trucks**> for the cargo holds available?
3. What is the safe working load of the <**slings**>?
4. Check <**hatch covers**> for damage and report.
5. Container <**lashings**> are damaged.
6. These goods are <**flammable**>.
7. Handle these goods with <**caution**>.
8. Check the <**compatibility**> of IMO class ... goods.
9. These goods <**are liable**> to spontaneous heating and <**combustion**>.
10. Check the proper <**segregation**> of goods.
11. These goods are <**poisonous**>.
12. Check the correct <**labels**>.
13. Place <**dunnage**> between the tiers.
14. Stow <**infectious**> substances separated by one hold/ compartment from foodstuffs.
15. Cover these goods with <**tarpaulins**>.
16. <**Ventilate**> the holds before entering.
17. Switch on hold <**ventilation**>.
18. Several barrels/drums are <**deformed**> and leaking...
19. Put on <**protective clothing**> and <**breathing apparatus**>.
20. Cover <**contaminated**> goods with tarpaulins.
21. <**Cool down**> the container with water.
22. The <**humidity**> of cargo is above normal/ below normal/critical.
23. The cargo <**is mouldy**>.
24. The cargo is partly eaten by <**rats**>.
25. The cargo is infected by <**vermin**>.

26. Close the hatch and operate the <**fire extinguishing system**>.
27. Plug the <**scuppers**> and report.
28. How much <**ballast**> can we take?
29. Start pumping <**slops**> from the slop tank.
30. We have tonnes of <**sludge**>.
