

**The Engine Room**  
**Tools and Equipment**

**Exercise 1**

|                                                                                                      |                                                                                                           |                                                                                                     |
|------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
|  <p>screwdriver</p> |  <p>hammer</p>           |  <p>pliers</p>   |
|  <p>spanner</p>     |  <p>nut</p>              |  <p>bolt</p>     |
|  <p>goggles</p>   |  <p>ear protectors</p> |  <p>gloves</p> |

**Exercise 2**

Please refer to Exercise 1

### Exercise 3

|                    |                                                                                                              |
|--------------------|--------------------------------------------------------------------------------------------------------------|
| A bolt is          | a thin piece of metal used with a nut to hold two things together.                                           |
| A screw driver is  | a hand tool used for turning screws. It is a thin metal rod with a handle.                                   |
| A hammer is        | a tool for breaking things and knocking in nails. It is made of a heavy piece of metal attached to a handle. |
| Safety gloves are  | worn at work to protect your hands.                                                                          |
| A spanner is       | a hand tool for turning nuts and bolts. It is made of a thin piece of metal.                                 |
| Ear protectors are | used to protect your ears against noise.                                                                     |
| A nut is           | a metal object with a hole in the middle. It is used with a bolt to tighten things together.                 |
| Goggles are        | glasses worn at work to protect your eyes.                                                                   |
| Pliers are         | a hand tool, with two handles which are pressed together, for taking out nails and cutting wire.             |

### Exercise 4

1. Everyone must use the safety equipment when required <at> work.
2. Ear protectors are used <to> protect your ears in the engine room.
3. A spanner is <a> hand tool for turning nuts and bolts.
4. Goggles protect your eyes <from> damage and dust.
5. Pliers are a hand tool for taking <out> nails and cutting wire.
6. A hammer is used <for> knocking in nails.
7. A nut is a metal object with a hole <in> the middle.
8. You may not drill holes <in> walls.
9. A screwdriver is a hand tool used for <turning> screws.

### Exercise 5

1. Be quiet! Don't **knock** nails into the wall!
2. Do you have pliers? I need to **cut** the wire.
3. These screws are loose. Will you **tighten** them, please?
4. You must use pliers to **pull** a nail out of a piece of wood.
5. We use a screwdriver when we want to **turn** screws.
6. The hammer's **handle** is loose. I'd like to have my money back.
7. Do these gloves **protect** you from chemicals?
8. The furniture onboard is fastened with a **bolt** to the deck.
9. You can find a lot of **tools**, such as a screwdriver, pliers, pincers, etc. in a workshop.

## Engine Room Equipment

### Exercise 1

|                       |                   |             |
|-----------------------|-------------------|-------------|
| Fresh Water Generator | Steering Gear     | Main Engine |
| Provision Compressors | Diesel Generators | Coolers     |

|          |                     |                    |
|----------|---------------------|--------------------|
| Purifier | Auxiliary Boiler    | Exhaust Gas Boiler |
| Pumps    | Oil Water Separator | Crankcase          |

|                      |                              |
|----------------------|------------------------------|
| Main Air Compressors | Air Conditioning Compressors |
|----------------------|------------------------------|

### Exercise 2

fresh water generator

air conditioning compressors

oil water separator

exhaust gas boiler

main air compressors

### Exercise 3

|              |                    |
|--------------|--------------------|
| a boiler     | <b>to boil</b>     |
| a separator  | <b>to separate</b> |
| a generator  | <b>to generate</b> |
| a purifier   | <b>to purify</b>   |
| a compressor | <b>to compress</b> |
| a cooler     | <b>to cool</b>     |
| a pump       | <b>to pump</b>     |

## Motorman Watchkeeping Requirements

### Exercise 1

Good morning. Can I ask you a few questions regarding the watchkeeping duties of a **motorman**?

No problem, go ahead.

Ok, my first question is: what does a motorman have to do when he starts his watch?

First of all, he must inspect the engine room, **the steering gear room**, the emergency fire pump compartment and the air conditioning compartment. He must also check the lubricating oil, **the fuel oil sludge** and the water levels of the engine room tanks.

Is checking working and stand-by equipment part of the motorman's duty?

Yes, of course. And in addition he must also check equipment for abnormal sound and vibrations and check bilge space for **abnormal leakages**. He must report everything to the duty engineer.

What about his duties during the watch?

A motorman must inspect the engine room and related rooms at regular intervals and keep the engine room clean. If he observes any abnormal leakage, he must report it to **the duty engineer** immediately.

What does the motorman have to do at the end of his watch?

He must **clean** equipment and make sure that the next motorman is ready for duty.

## Exercise 2

|             |                                          |
|-------------|------------------------------------------|
| watch       | <work period on a ship>                  |
| tank        | <a container>                            |
| compartment | <a separate area for a specific purpose> |
| check       | <to inspect, to control>                 |

## Exercise 3

### Reporting task

Prepare notes for a 2 minute presentation on the following question:

#### What are the motorman's duties?

Consider what the duties are at the beginning and end of the watch, the duties which have to be carried out during the watch and the equipment and compartments which must be checked.

Use any of the following expressions in your presentation.

First of all/Firstly/At first, he must /has to ...

Secondly, he must/has to ...

Thirdly, he must/has to ...

Besides, ...

In addition, ...

Moreover, ...
