

The Weather

The Weather and the Seasons

Exercise 1

The weather changes with the <seasons> and <months>. There are usually four <seasons> in a year: <spring>, <summer>, <autumn> and <winter>. When it is summer in the <northern hemisphere>, in Europe for example, it is winter in the <southern hemisphere>, in Australia and South America. When it is winter in Paris, the people in Rio de Janeiro celebrate Carnival outside in the streets.

In some <regions> of the world there is also a <dry season> and a <rainy season>. It is <spring> in the Hel peninsula in Poland. The weather is <mild>. The <birds> are back after the <winter>. It often rains and the grass is <green>. The leaves in the <trees> are green, too. The <lighthouse> is red. The <water> in the bay is <grey>. There are no <waves>. It is <calm>.

It is <summer> in Santa Cruz Tenerife. The weather is <hot>. The sun <shines> every day. The <sky> is blue. The water in the <ocean> is blue, too. There are some clouds in the sky. The <temperature> of the air can be 30 or 35 degrees C. The days are long and the nights are short. The sun <rises> early and <sets> late.

It is <autumn> in Gdynia in Poland. There <big> waves breaking on the <sandy> beach. It is often <windy>. The Baltic sea can be <rough>. The sky is <overcast> with <clouds>. It <rains> sometimes. The temperature of the air is about 15 degrees C. The leaves in the trees are turning <yellow> and <brown>. The season is called “the <fall>” in America because the leaves <fall> from the tree. The birds are preparing to <migrate> to warmer <regions> of the world.

It is <winter> in Jastamia in the Hel peninsula in Poland. The weather is very <cold>. It often <snows>. There is sometimes <ice> in the bay. The temperature of the air can fall <below> zero. The days are <short> and the nights are <long>. The sun rises late and sets early.

Exercise 2

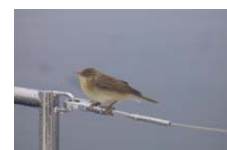

winter

summer

autumn

spring

Exercise 3

Wind	windy	Sun	sunny
Rain	rainy	Snow	snowy
Cloud	cloudy	Mist	misty
Fog	foggy	Ice	icy
Shower	showery	Storm	stormy
Breeze	breezy	Chill	chilly
Sand	sandy	Rock	rocky
Frost	frosty	Wave	wavy

Exercise 4

high	low
short	long
cold	warm
weak	strong
slow	quick
heavy	light
calm	rough
sea breeze	land breeze
early	late
below	above

Exercise 5

It is cold outside. Everything is white. The streets are icy and it is difficult to walk.
The air is frosty. It is **winter**.

It is nice and warm. The sun often shines and we can see the first flowers in the parks and gardens.
Everything comes to life. It is **spring**.

It is still warm. The colours of the leaves start changing. The trees in the parks look beautiful and children collect their red and yellow leaves when they fall to the ground.
It is **autumn**.

It is very hot. The sun shines every day. People often go to the beach and swim in the sea. Children play in the sand. They build sand castles. It is **summer**.

Exercise 6

Record your answer exercise

Model answers:

Spring	It is growing warm. It often rains but there are many sunny days. Everything is green.
Summer	It is hot. The sun shines every day. People go to the beach and swim in the sea.
Autumn	It is mild but it is often windy. It is still warm but the days are short.
Winter	It is cold and it often snows. At sea the wind blows the first winter storms.

The Weather and the Months

Exercise 1

The first month of the year is	January
The second month of the year is	February
The third month of the year is	March
The fourth month of the year is	April
The fifth month of the year is	May
The sixth month of the year is	June
The seventh month of the year is	July
The eighth month of the year is	August
The ninth month of the year is	September
The tenth month of the year is	October
The eleventh month of the year is	November
The twelfth month of the year is	December

Exercise 2

Listen, read and record your answer exercise

Texts:

December – March	April – June	July – August	September – Nov.
Usually quite cold, lots of snow in January and February, sunny days but many frosty nights. Jan. and Feb. are the coldest months. March brings a change in the weather	Nice weather but it rains sometimes. It can often be wet and windy but it is becoming warmer. May can be very mild with long days and June sometimes brings a heat wave. The weather is getting better	The warmest months with hot weather, lots of bright sunny days, cool sea breezes. The best time to go to the beach. The water in the Baltic sea becomes warmer. Occasional showers.	The weather is often nice in September but it changes in November becoming windy and rainy. It becomes cold and is often foggy. The days grow shorter and it gets dark very early.

Exercise 3

December - March

It is **<cold in December>** and January. It is windy in February and March. It becomes **<warmer in March>**. We can see the spring flowers in the parks.

April – June

It is **<nice and sunny in April>** and May. It is **<hot in June>** and we start going to the beach and swimming in the sea. The water is warm.

July – August

It is still **<hot and dry in July>**. The sun shines every day and the weather is dry and beautiful. We are still **<on holiday in August>**. Many people come to the seaside.

September – November

It is still warm but the weather is changing. It often **<rains in October>**. The leaves change colours and fall from the trees. **<November is wet>**.

Exercise 4

H means a high pressure area.

L means a low pressure area.

Exercise 5

Record your answer exercise

Texts:

What does H stand for? **<It stands for the area of high pressure.>**

What does L stand for? **<It stands for the area of low pressure.>**

Where is the low pressure area on the Australian weather map? **<It is near Tasmania.>**

Where are the high pressure areas on the weather map? **<They are south of Australia.>**

How high is the barometric pressure near New Zealand? **<It is 1021 hectopascals.>**

How low is the barometric pressure over the north of Australia? **<It is 1006 hectopascals.>**

How many high pressure areas can you see on the weather map? **<I can see three Highs.>**

How many low pressure areas can you see on the weather map? **<I can see five Lows.>**

Exercise 6

Region	regional
Season	seasonal
Occasion	occasional
Tropic	tropical
Front	frontal
Type	typical
Torrent	torrential
Continent	continental
Norm	normal
Coast	coastal
Cone	conical
Equator	equatorial
Tide	tidal
Horizon	horizontal
Centre	central

Exercise 7

coastal water

occasional fog

rain shower

polar air

tropical storm

cold front

warm front

local breeze

continental climate

typical weather

torrential rain

conical buoy

variable wind

Exercise 8

Line	linear
Angle	angular
Circle	circular
North Pole, South Pole, pole	polar
Triangle	triangular
Rectangle	rectangular

Exercise 9

Easterly winds blow from the East.

Westerly winds blow from the West.

Northerly winds blow from the North.

Southerly winds blow from the South.

In the northern hemisphere polar air comes from the North.

In the southern hemisphere polar air comes from the South.

Trade winds blow on both sides of a zone with no wind.

The Equatorial trough is also called the “Doldrums”.

The Roaring Forties are gale winds in the southern hemisphere.

There are variable winds in the northern and southern hemispheres.

There are also local winds in different parts of the world.

In Europe the Mistral blows in the south of France.

The Bora blows in the Adriatic Sea.

They are seasonal winds and regional winds.

Exercise 10

Record your answer exercise

The Weather and the Ship Movements

Exercise 1

The ship is rolling when she moves from her starboard side to her portside with the waves.

The ship is pitching when her bow and her stern rise and fall with the waves.

The ship is yawing when her bow is pushed to starboard and then to port.

The ship is heaving when she rises up and falls back in a trough.

The ship is surging when she is pushed forward by the waves and then falls back into a trough.

The ship is swaying when she moves bodily to starboard and then to port.

Exercise 2

Wind and waves can make the ship move in six different ways, for example:

These are the angular motions:

The ship is <rolling> when she moves from her starboard side to her portside with the waves.

The ship is <pitching> when her bow and her stern rise and fall with the waves.

The ship is <yawing> when her bow is pushed to starboard and then to port.

These are the linear motions.

The ship is <heaving> when she rises up and falls back into a trough.

The ship is <surging> when she is pushed forward by the waves and then falls back into a trough.

The ship is <swaying> when she moves bodily to starboard and then to port.

Exercise 3

The boat is <near> the bridge. It is moving <towards> the bridge. It is going to sail <under> the bridge. The bridge lies <between> two sides of the estuary. There are clouds <in> the sky.

There are no waves <in> the bay.

These ships are <at> sea. There are some waves <on> the surface of the sea.

There is a passenger ship <at> the quay. She is <in> the port. She is moored <to> the quay.

The ship is listing <in> heavy weather.

Ships are moving slowly <in> the Suez Canal.

Containers are loaded <on> deck.
